### Kiersten Zug

437 NE 72nd ST  
Apt 218  
Seattle, WA 98115

**Objective:** I am a Japanese translator excited to transition into the tech industry. I am looking for opportunities where I can apply what I have learned and continue to grow as a programmer.

### Community Closet (Group Project)

May 2022 - June 2022

Community Closet is an application where users can create online listings to give away clothing items they no longer need. Other users can then comment on the post to express interest in the item and ask to arrange pickup.

**Technologies used:** Multer S3, AWS, Bootstrap, MySQL, NodeJS, Express, HTML, CSS, JavaScript, Handlebars, MVC Structure

### Weather Dashboard (Individual Project)

March 2022

Weather dashboard is an application that displays the current weather of a city and the next five day forecast. It features dynamically updated HTML and CSS and uses local storage to store persistent data. It uses two third-party APIs provided by OpenWeather.

**Technologies used:** HTML, CSS, JavaScript, API, Local storage, Bootstrap

### Bitcoin Tracker (Group Project)

Mar 2022 - Apr 2022

Bitcoin Tracker displays the bitcoin price for the last 30 days on a line-style graph or a candlestick-style graph. Users can switch the style of display by clicking a button. Bitcoin Tracker also shows the bitcoin price in real time and the current number of Bitcoin Core releases at the top of the application.

**Technologies Used:** HTML5, CSS (Skeleton framework), JavaScript, API (CoinGecko API, Github API), Client-side Storage
